PROFILE

Computer Science undergraduate (University of Westminster UK, delivered through IIT Sri Lanka) in my internship year. I design interfaces and ad creatives with intention, build them myself in code so nothing gets lost in translation, and shape the copy and structure around what actually makes someone act. It is one skill applied at three layers, not three separate interests — and I pick up new tools fast to keep all three moving together.

SKILLS

Design	Canva · Landing page design · Ad creatives · Social media visuals · Typography & colour fundamentals · Figma (basic)
Development	HTML · CSS · JavaScript · Node.js · React · React Native · TypeScript · Java · Firebase
AI Tools	Claude AI · ChatGPT · GitHub Copilot · Grok — for content generation, copywriting and automation logic
CRM & Email	GoHighLevel (learning) · Nodemailer/SMTP · Double opt-in · Email sequence design
Productivity	Git · GitHub Actions · Notion · Google Workspace

DESIGN & MARKETING PROJECTS

Stella Fit — Personal Training Landing Page 2026
HTML · CSS · JavaScript · Claude AI · Branding

A landing page for a female-focused personal training brand, built to convert paid traffic into discovery calls.

- Designed a warm, empowering brand system — palette, typography and tone — built around a ‘training as self-care, not punishment’ positioning for women aged 25–45
- Built the full page myself in HTML, CSS and JavaScript using AI-assisted development, then hand-tuned spacing, hierarchy and responsive breakpoints so the design held up exactly as intended on mobile
- Structured the page around a clear conversion path — trust signals, programs, social proof and a single strong CTA — so the design choices were always in service of getting a booked call

DropSwift — SaaS Landing Page + Ad Campaign 2026
HTML · CSS · JavaScript · Canva · Leonardo.ai · Ad Creative

A landing page and matching Facebook ad campaign for a fictional ecommerce automation SaaS.

- Designed a clean, conversion-focused interface using a navy and orange palette to signal trust and urgency for an ecommerce automation product, then built it fully in HTML, CSS and JavaScript with AI-assisted development to move fast without losing control over the details
- Extended the same visual language into a matching Facebook ad campaign — generating background imagery with Leonardo.ai and composing the final creatives in Canva — so the look stays consistent from the first scroll-stop to the final click
- Designed two ad variants for different funnel stages: a cold-traffic awareness creative and a social-proof retargeting creative, each with its own layout logic suited to that audience

DEVELOPMENT PROJECTS

Backend & Security Engineer — CookMate (AI Recipe Mobile App, Team) 2025 – 2026
Node.js · Firebase · React Native · REST API · CI/CD · TypeScript

AI-powered recipe app — I owned authentication, security infrastructure and DevOps for the team.

- Built secure email OTP password reset with time-limited Firestore codes and anti-enumeration protection

- Implemented Google Sign-In, Firebase Admin SDK auth, token session management and the full user API
- Set up the GitHub Actions CI/CD pipeline and Jest unit testing framework, and fixed TypeScript compilation errors that were blocking Render deployment

Personal Portfolio Website

2026

HTML · CSS · JavaScript · Bootstrap · EmailJS

My own self-branded portfolio, designed and built end to end as a working example of the same design-to-conversion process I bring to client work.

- Designed the structure and visual identity myself, then built it in HTML, CSS, JavaScript and Bootstrap, wiring up EmailJS so the contact form actually delivers enquiries instead of going nowhere
- Applied on-page SEO structure and personal branding throughout, treating the portfolio itself as a live conversion surface rather than just a static showcase

EDUCATION

BSc (Hons) Computer Science — Internship Year (Year 3 of 4)

2024 – Present

University of Westminster, UK — delivered through Informatics Institute of Technology (IIT), Colombo

- UK-affiliated degree delivered through IIT, Colombo
- Key modules: OOP · Web Development · Database Systems · Algorithms · Networks

CERTIFICATIONS & LEARNING

- Meta Blueprint — Facebook Ads Fundamentals (in progress)
- Google Analytics 4 Certification — Google Skillshop (in progress)
- GoHighLevel CRM — self-directed learning via official documentation and tutorials

Open to internship and junior roles in creative design, full-stack development and digital marketing · Available immediately
